

Delivering the Next Generation of Cell Therapy Manufacturing

Astellas and Yaskawa Electric *collaborate to develop cell manufacturing platform

*The closing is subject to certain closing conditions, including receipt of required regulatory approvals

Before

Challenges in cell manufacturing

Human-dependent and manual work

"Accuracy" depends on the craftsmanship

"Precision and Reproducibility" are essential for stability of manufacturing

Challenges in "Technology transfer" of complex manufacturing process to other sites

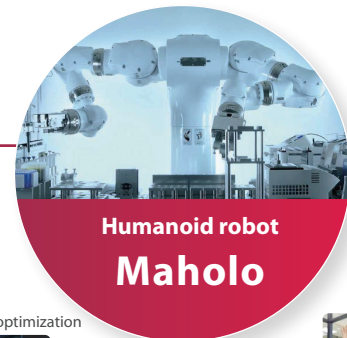

Innovation

After

Platform with Maholo at the core

Technology sharing to other sites through digitalization

Cell culture experiments with the same or better skills as an expert

Transmission of digitized work process and cell profiles

Optimization of cell manufacturing processes

Proposal of optimal protocols

AI-based analysis, data accumulation, and machine learning

Manufacturing process validation

Manufacturing process

AI-optimization

One Click Transfer

Data sharing

Common platform from research to manufacturing

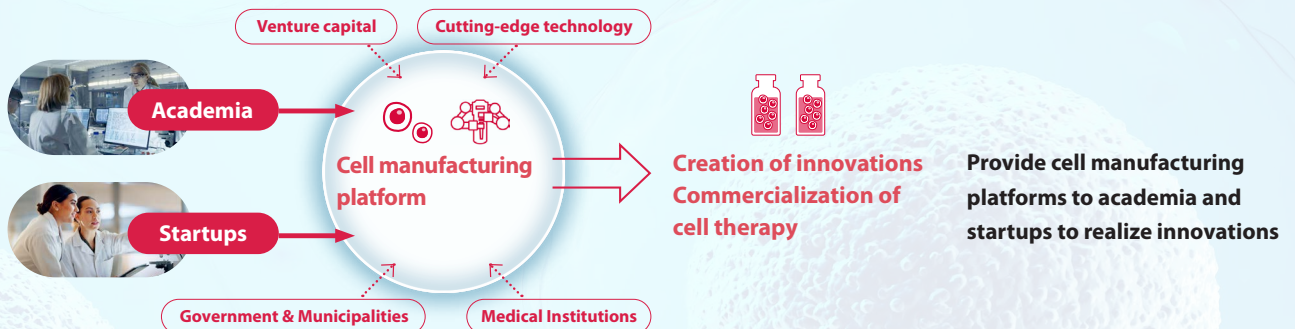

GMP manufacturing

AI-analysis of work data via Maholo and repeated optimization experiments based on the results

Digitalize manufacturing processes and transfer technology with one-click

Creating a cell therapy ecosystem
